1yr DAPPV	16-17 weeks
1yr Leptospirosis	16-17 weeks
1yr Rabies	16-17 weeks

Program ends at approximately 17 weeks of age.

Your Puppy's immune system is still developing and it is very susceptible to diseases. For example, Parvovirus, which are very hardy and live in the soil for long periods of time. Keeping this thought in mind, our veterinarians ask that you do not let your puppy on the ground outside of your own backyard until the vaccination series has been completed. Wait approximately 10-14 days after the third DAPPV vaccine has been given before you take your puppy out. Please carry your pet in and out of the Hospital and do not allow them in or around the shrubs surrounding the Hospital.

ALL PUPPY PROGRAMS ARE NON-REFUNDABLE EVEN IF PUPPY IS GIVEN AWAY AND EXPIRES EITHER AFTER THE RABIES VACCINE HAS BEEN GIVEN OR 17 WEEKS OF AGE, WHICHEVER COMES FIRST.
